Quick Dry is fabric technology that moves moisture away from the skin, allowing it to dry quickly and keep the wearer extremely comfortable in a wide variety of temperatures, activities, or conditions. The quick distribution of moisture away from the skin keeps the body dry, comfortable and better able to regulate temperature. Fabric absorbs sweat from the skin, then transfers it to the fabric surface where it can evaporate rapidly. Hydrology® fabrics are constructed to provide breathability and air circulation through the knit or woven structures.

Compression
Nylon and spandex are combined to create a close-fitting, comfortable, moisture-wicking garment. The high tenacity stretch provides muscles with a firm compression that reduces muscle vibration, allowing you to increase leg strength and endurance. The compression fabrics’ open knit construction creates an effective moisture transfer environment to keep you cooler, more energized, and able to perform at a maximum level for a longer duration. There is also a special anti-odor feature within the fabric.

Fabric Technology
Technology is defined as the science of dealing with the properties, distribution and circulation of water. At ASICS, we apply this philosophy to the management and evaporation of sweat. The quick distribution of moisture away from the skin keeps the body dry, comfortable and better able to regulate temperature. Fabric absorbs sweat from the skin, then transfers it to the fabric surface where it can evaporate rapidly. Hydrology® fabrics are constructed to provide breathability and air circulation through the knit or woven structures.
